Progress Chart

	Beginning	Week 2	Week 4	Week 6	Week 8	Week 10	Week 12
Date							
Total Body Weight							
Lean Body Weight							
Fat Weight							
Body Fat Percentage							
BMR							

Notes:

Note to Trainers: This table is designed to show that your clients should be gaining lean muscle mass and losing fat. Carefully monitor their progress in these areas. Make sure that Fat Weight decreases and Lean Body Weight increases. The amount of Fat Weight lost and the increase in Lean Body Weight will differ from person to person. On the average, a person will lose about 2 pounds of fat a week and gain 1/2 a pound of muscle. This will vary as they continue to lose more fat and gain muscle. Review Section 5 in *Fitness: The Complete Guide* for further explanation.

ZigZag / Caloric Modifications

	Beginning	Week 2	Week 4	Week 6	Week 8	Week 10	Week 12
Date							
Average Calories							
Upzig Calories							
Downzag Calories							

Notes:

Note to Trainers: Every two weeks, you must re-evaluate your client's Basal Metabolic Rate. As they continue to gain lean muscle mass and lose fat, their BMR will change. They will actually need to start eating more to accommodate their increase in lean body weight. Take special care to explain this to them as well as explain why the number on the scale is not as important as the relation between Lean Body Weight and Fat Weight. Also note that your client's Upzig days should fall on days that they will be training, and their downzag days are non-training days.

Time							

Notes:

Note to Trainers: The times that your clients eat will vary greatly. However, their biggest high-carbohydrate meal of the day should be the one they have prior to training. You must adhere to Rule Three of the Five Rules of Nutrition. Always eat for what you are going to do, not what you have done. To review the Five Rules of Nutrition, refer to Unit 18 in *Fitness: The Complete Guide*.
